This picture has
a **3D** effect.

3D

Which picture has a
3D effect?

Let's read !

Communication is essential to people. People understand each other's needs, feelings and desires through communication. And communication allows new ideas and **technology** to be developed. Communicating today is very easy, but it wasn't always like this. Let's have a look at how people communicated in old times...

Why is communication essential?

A long time ago, communication was very basic and quite difficult. In fact, most people could only communicate by talking. To communicate over long distances, smoke or drums could be used.

How did people communicate a long time ago?

When paper was invented, it made communicating much easier. People first communicated using **symbols**, and then developed writing languages. People could use letters to communicate. Horses could be used to carry letters over long distances. Even pigeons could be used to send messages.

How did people communicate using paper?

Communication has improved greatly this century. When the telephone was invented, it allowed **long-distance** spoken communication for the first time. When mobile phones were invented, it also allowed us to send instant messages.

What did the invention of phones allow us to do?

When email technology was invented, it allowed pictures and text to be sent together over the Internet. Even video communication has been made possible. Now the whole world can communicate easily, cheaply, and quickly.

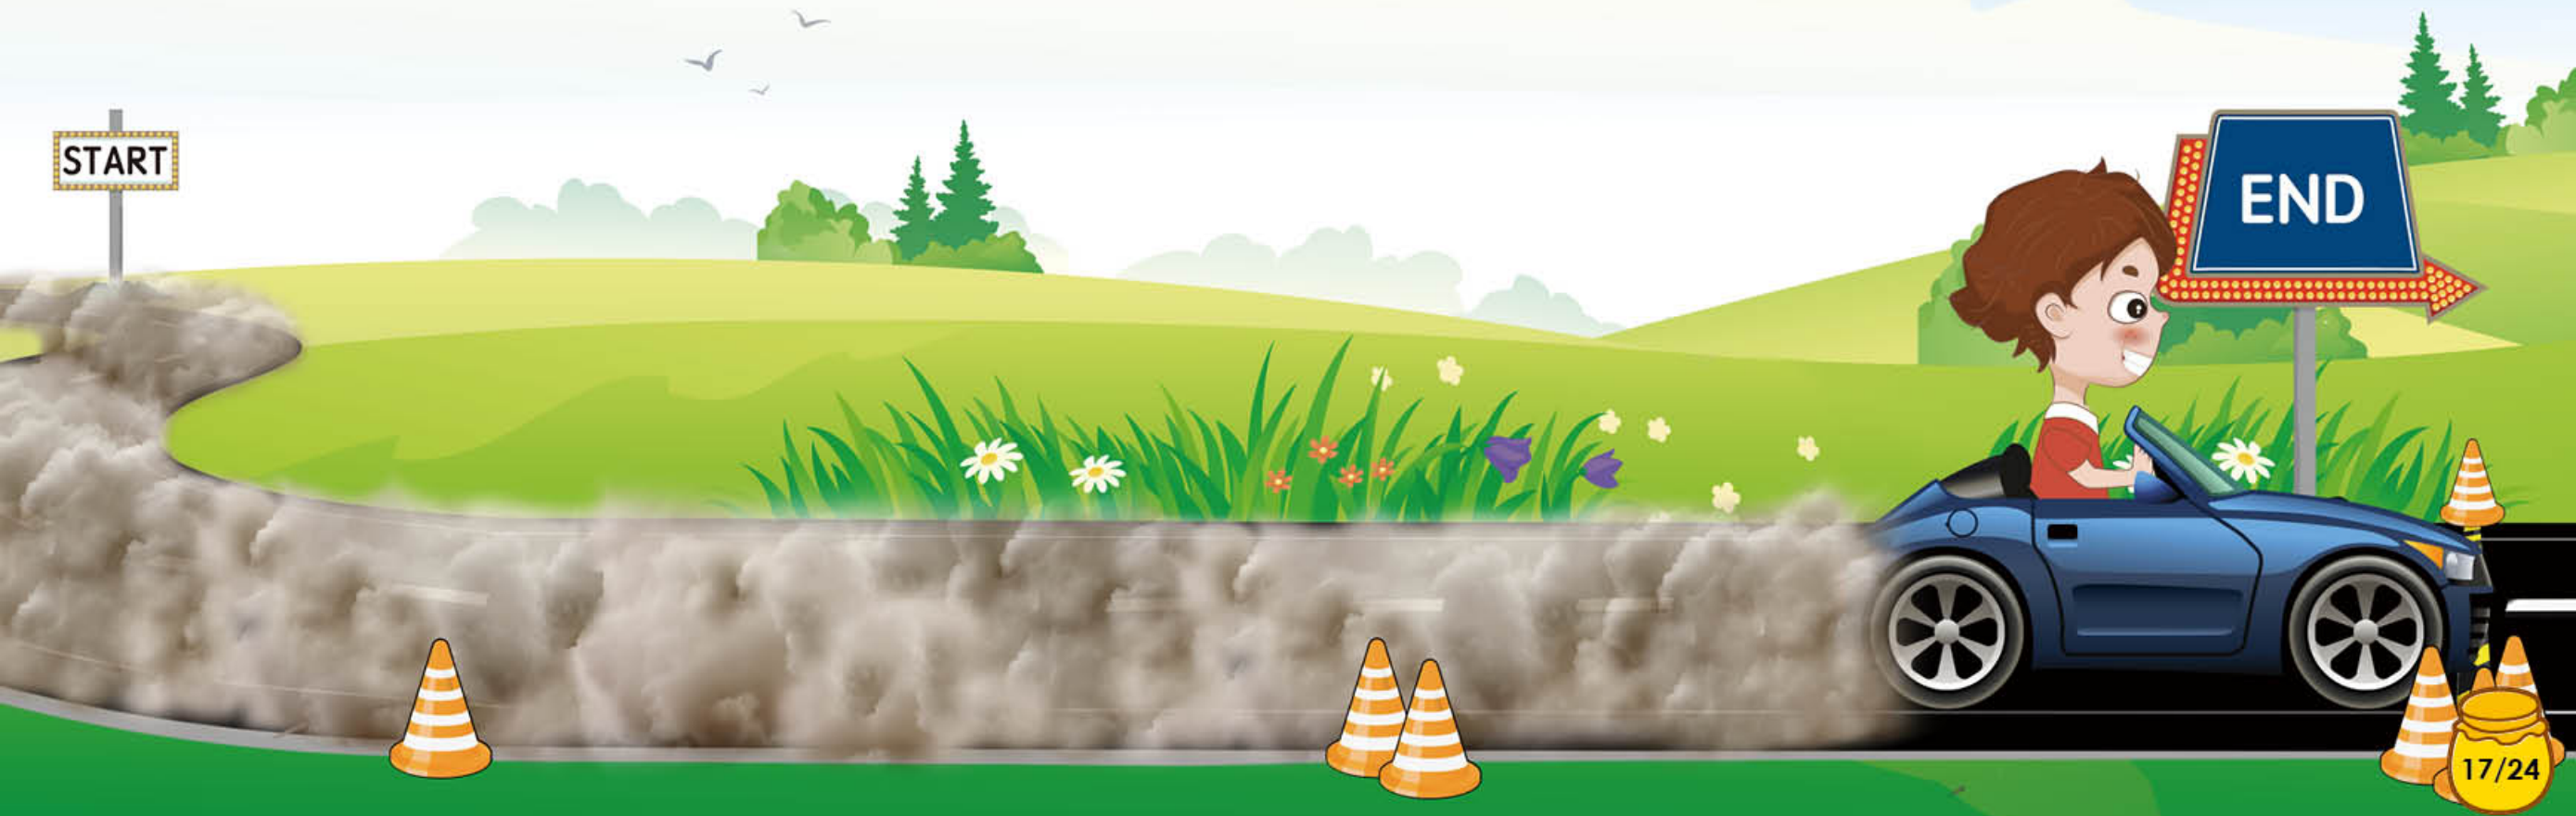

How can we communicate using the Internet?

Who knows what sort of communication the future will bring us. It is thought by many people that 3D holographic video could be the next big form of communication. What do you think?

What do you think will be the next form of communication?
