Unit 8 Technology and invention

Topic 1—Lesson 2(下篇)

A piece of electronic equipment that you find useful

IELTS Speaking Part 2 (10 minutes)

You will be given one minute to prepare to talk about the topic on the task card. You will have to talk for 1-2 minutes, and then the teacher will give you feedback for 2-3mins. (5 minutes)

Describe a piece of electronic equipment that you find useful.

You should say:

what it is

how you learned to use it

how long you have had it

and **explain why** you find this piece of electronic equipment useful.

Tips: During the first stage of Part 2, you don't need to talk. Keep the questions in mind and think them over.

2.3 Here is another model for the IELTS Speaking Part 2. We will focus on the words and expressions highlighted and in red below. (5 minutes)

Model 2

What it is & how long you have had it: A piece of electronic equipment that has always transfixed my attention throughout the years is the television. The **versatility** and simplicity of the TV demonstrate the importance it plays in our daily lives.

How you learned to use it: One can hardly walk fifty metres without seeing a monitor or TV screen, and my generation has grown up with a TV in practically every room of the house. Although what airs on the television has its **pros and cons** and is subject to debate, I merely wish to contemplate the use of the TV as a screen with which you choose what can be seen on it and how it will be used. For example, without the TV we wouldn't have computer screens or even phone screens.

Why you find it useful: Also what makes this a valuable piece of electronic equipment is the plethora of education programmes. You can view on it and through the use of accessories you can view recorded educational content on your TV as well. Studies have shown that through watching televised shows, people living in social isolation can create parasocial or **faux** relationships with the characters from their favourite shows and movies as a way to deflect feelings of loneliness. The **implication** is that teenagers and the elderly could especially benefit from watching a moderate amount of TV, especially if they are feeling depressed or lonely.

IV. IELTS Speaking Part 3 (10 mins)

1. Please answer the following question from Part 3. According to your answer, the teacher will give you feedback on how to improve your organisational skills. (5 minutes)

How to organise your answer in Part 3:

I: Introduction Sentence + P: Points(Point1, Point2...)

What kinds of machine are used for housework in modern homes in your country?

I: Two most common types of electronic devices used for housework are vacuum cleaners and washing machines.

P1: The vacuum cleaner is a simple tool for cleaning one's home, but there are actually complicated internal parts that create a suction using an air pump. What makes this machine so useful is its inherent ability to clean many types of surfaces, which makes it vital to own one in every household.

P2: Washing machines are also popular among numerous people, especially the working class. Seldom do they have enough time and energy to wash their dirty clothes and bedsheets after a tiring day in office. Thus, using washing machines is a wise choice.

2. You will learn some key words and expressions from these questions. Pay attention to the structure of the underlined sentences, and the words in red. (5 minutes)

Key Words and Models

How have these machines benefited people? Are there any negative effects of using them?

 Vacuum cleaners have helped to clean homes for over a hundred years. The first models were manual and had to be hand pumped in order to suck up debris and dust. At the turn of the 20th century vacuums began to be motorised, and function using electricity. As testament to this invention, it is currently in a third evolutionary phase where vacuums run **autonomously**. There are no negative side-effects whatsoever in using vacuum cleaners.

Do you think all new homes will be equipped with household machines in the future? Why?

 I think as costs are driven down by demand, many people will own a variety of intricate machines that perform mundane housework. If the evolution of the vacuum cleaner is any **indication** to that effect, I predict that the household of the future will be teeming with autonomous machines whose only function is housework. Just yesterday I read about a smart-refrigerator that knows when you are out of food and will alert you via text messages to your phone and will even order new groceries online. It's clear that as human society becomes more complex, our need to replace tedious tasks, especially those in the household, is necessary as humans are creative creatures that should not be hindered by trivial work.

V. Summary (5 minutes)

Key Words & Expressions

versatility

pros and cons

faux

implication

autonomously

indication

Key Sentences

The **versatility** and simplicity of the TV demonstrate the importance it plays in our daily lives.

Although what airs on the television has its **pros and cons** and is subject to debate, I merely wish to contemplate the use of the TV as a screen with which you choose what can be seen on it.

Studies have shown that through watching televised shows, people living in social isolation can create parasocial or **faux** relationships with the characters from their favourite shows and movies as a way to deflect feelings of loneliness.

The **implication** is that teenagers and the elderly could especially benefit from watching a moderate amount of TV, especially if they are feeling depressed or lonely.

As testament to this invention, it is currently in a third evolutionary phase where vacuums run **autonomously**.

If the evolution of the vacuum cleaner is any **indication** to that effect, I predict that the household of the future will be teeming with autonomous machines whose only function is housework.
