Unit 8 Technology and invention

Topic 3—Lesson 2(下篇)

A useful technical skill you learned

IELTS Speaking Part 2 (10 minutes)

You will be given one minute to prepare to talk about the topic on the task card. You will have to talk for 1-2 minutes, and then the teacher will give you feedback for 2-3mins. (5 minutes)

Describe a useful technical skill you learned.

You should say:

why you learned this skill

how (and **when**) you learned it

how difficult it was to learn

and **explain how** this technical skill is useful for you.

Tips: During the first stage of Part 2, you don't need to talk. Keep the questions in mind and think them over.

2.3 Here is another model for the IELTS Speaking Part 2. We will focus on the words and expressions highlighted and in red below. (5 minutes)

Model 2

Why you learned it: A technical skill that has proven to be one of the most useful over the years has been computer programming and repair. Learning this skill was born out of necessity as I was having difficulty keeping my computer from crashing. Also, every time I **booted up** my computer, it would always freeze.

How and when you learned it: After about a week of experiencing horrendous and repetitive issues with my computer, I decided to enroll in a local technical school to learn the **ins and outs** of computer repair.

How difficult it was: It was extremely difficult to learn this skill as it required months of dedicated study both in books and **hands-on** experience. I worked non-stop in order to pick up enough knowledge on the subject and pass my course. In my humble opinion, it was one of the hardest things I have ever had to learn.

How it is useful for you: After having learned this skill, I have saved a lot of money by not having to outsource my computer repairs. I have also managed to create several useful apps, which I gave to my friends and family, with my new programming skills. I am even thinking of selling those apps and perhaps securing another source of income rather than my day job.

IV. IELTS Speaking Part 3 (10 mins)

1. Please answer the following question from Part 3. According to your answer, the teacher will give you feedback on how to improve your organisational skills. (5 minutes)

How to organise your answer in Part 3:

I: Introduction Sentence + P: Points (Point1, Point2...)

What important skills do you think a student should learn?

I: Beyond just learning academic knowledge, students should strive to master interpersonal skills and leadership qualities.

P1: After completing their schooling, students will need networking abilities in any future career they might **embark upon** later in life. Such techniques could help them enhance their efficiency at work due to strong teamwork or cooperation. Otherwise, they will sooner or later lose others' support or even be excluded from their team.

P2: In the meantime, leadership skills deserve to be grasped as well. As we all know, in order to survive and prosper in any professional field in this highly competitive world, citizens ought to be equipped with the outstanding ability to be good leaders, because these people are often more likely to become accomplished in the future.

2. You will learn some key words and expressions from these questions. Pay attention to the structure of the underlined sentences, and the words in red. (5 minutes)

Key Words and Models

Why do we need to learn some technical skills?

 Technical skills are useful for finding a job later in life. While the humanities are part of what is considered a classical education, being able to do something like auto repair or computer programming is instantly **marketable** in today's economy. Teaching additional technical skills as part of a broader vocational educational strategy is the way to go for the 21st century.

Do you think technical skills have changed the way we work?

 I think having more technical skills than past generations has had a profound impact on the way we work presently. Due to widespread knowledge of advanced mathematical concepts, workers are able to solve complex issues and apply this knowledge to future tasks. This creates an extremely skilled **workforce**, which learns from its past mistakes. A workforce that has more technical skills is much more versatile and therefore can be utilised in more effective ways than in the past. Also, they are better adapted to current trends in technology and are more suited to today's working environment.

V. Summary (5 minutes)

Key Words & Expressions

boot up

ins and outs

hands-on

embark upon

marketable

workforce

Key Sentences

Also, every time I **booted up** my computer, it would always freeze.

After about a week of experiencing horrendous and repetitive issues with my computer, I decided to enroll in a local technical school to learn the **ins and outs** of computer repair.

It was extremely difficult to learn this skill as it required months of dedicated study both in books and **hands-on** experience.

After completing their schooling, students will need strong teamwork and networking abilities in any future career they might **embark upon** later in life.

While the humanities are part of what is considered a classical education, being able to do something like auto repair or computer programming is instantly **marketable** in today's economy.

These technologies have allowed the modern **workforce** to either work in offices or even at their homes.

The next lesson will be **Unit 8 Topic 4 An important invention that has influenced human society.**
