And Yet It Moves

We are going to learn about the beginning of the scientific revolution.

Warm-up

2 min

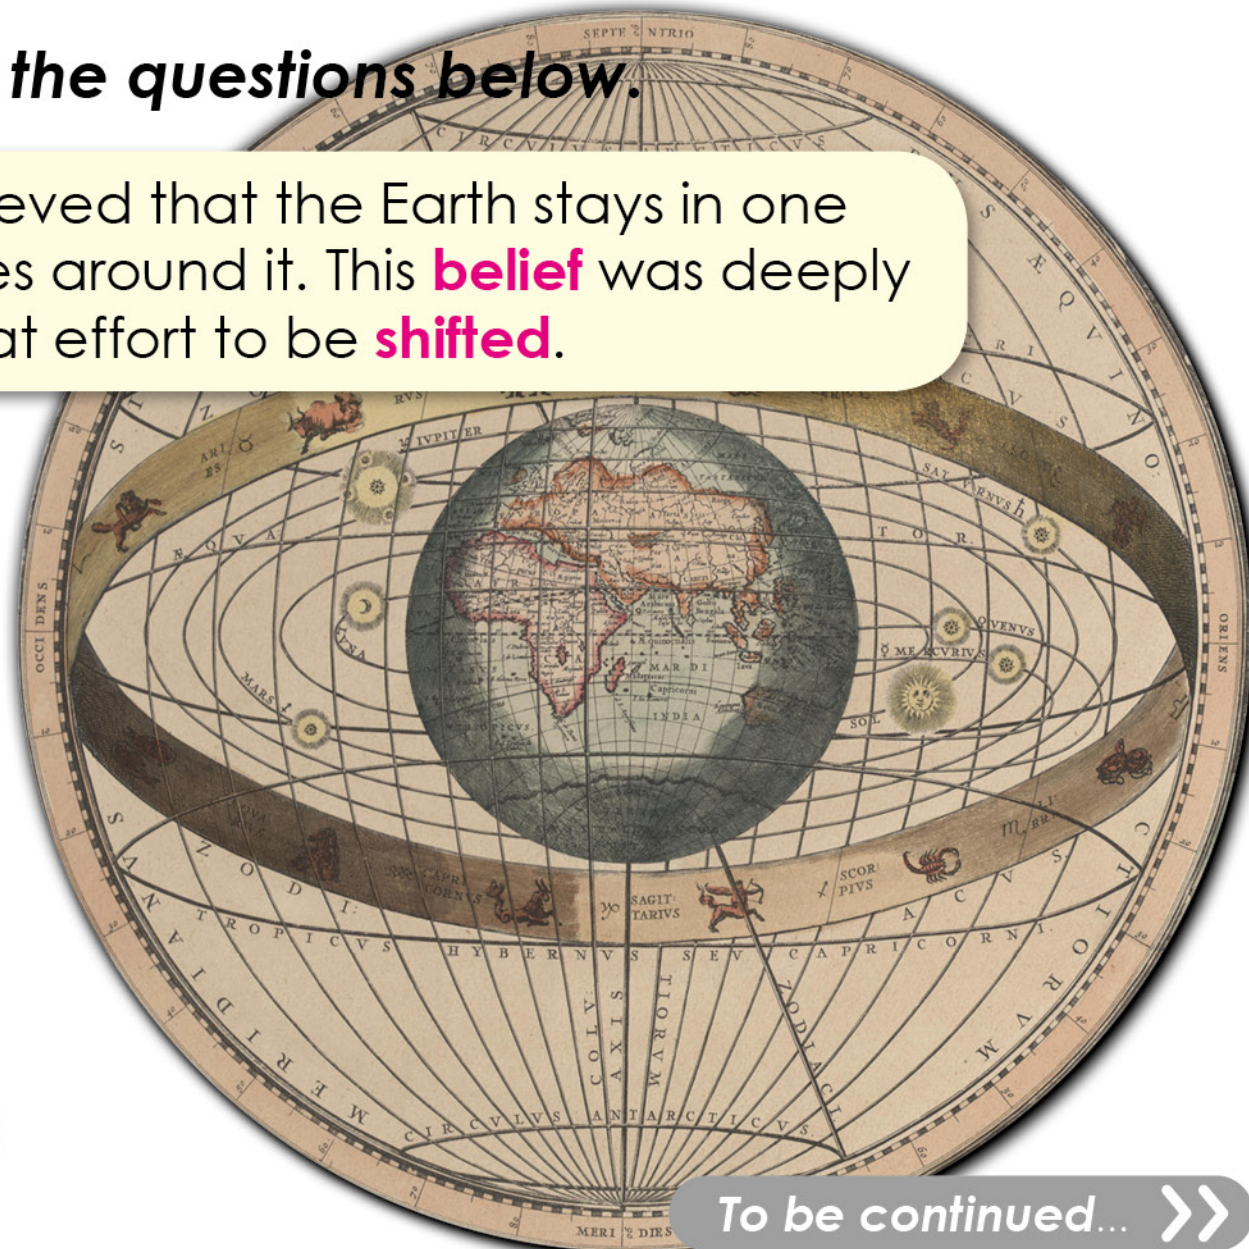

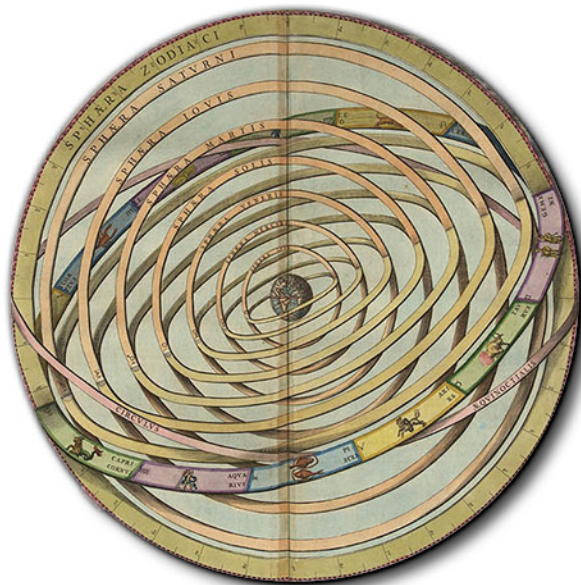

Do you recognize any of the things shown in this picture?

Reading 4 min

Read with the teacher and then answer the questions below.

For thousands of years, people strongly believed that the Earth stays in one place, while everything else in the sky moves around it. This **belief** was deeply rooted in people's minds, and it took a great effort to be **shifted**.

Does the Earth stay in one place?
How can you tell?

To be continued... >>

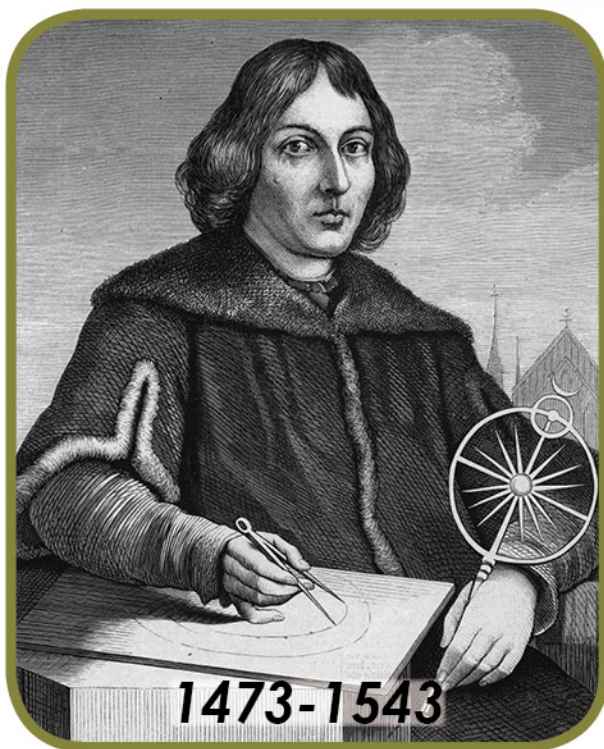

Reading

3 min

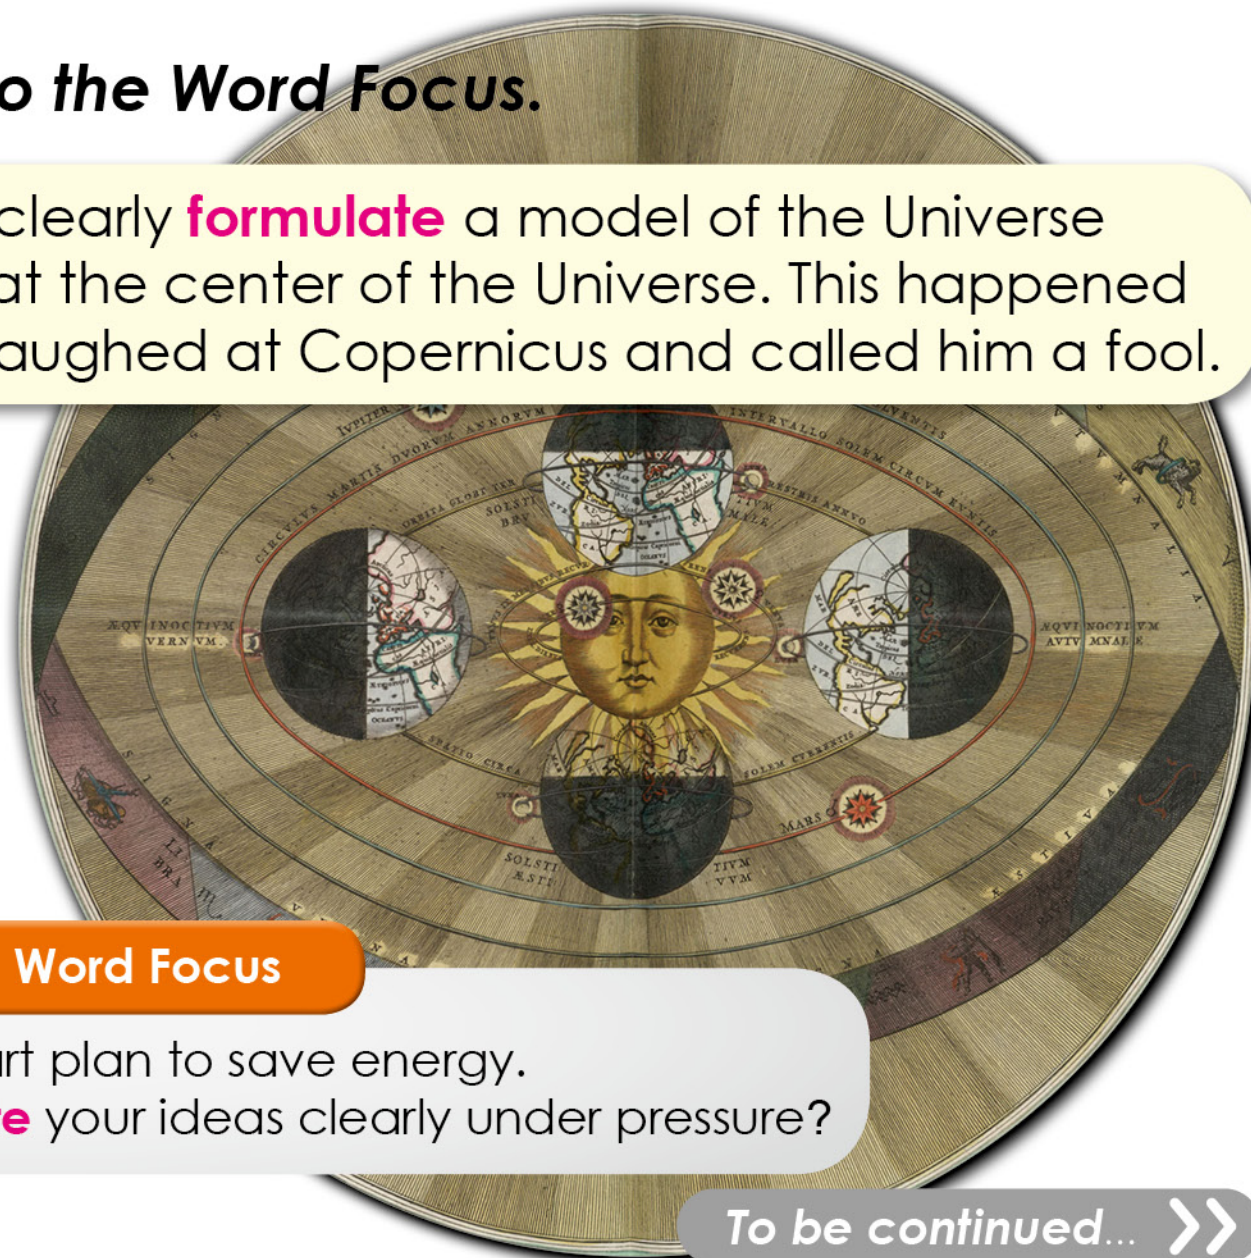

Read with the teacher and then move to the Word Focus.

Nicolaus Copernicus was the first person to clearly **formulate** a model of the Universe that placed the Sun, rather than the Earth, at the center of the Universe. This happened in the 1500s, and at that time most people laughed at Copernicus and called him a fool.

Word Focus

- He **formulated** a smart plan to save energy.
- Can you still **formulate** your ideas clearly under pressure?

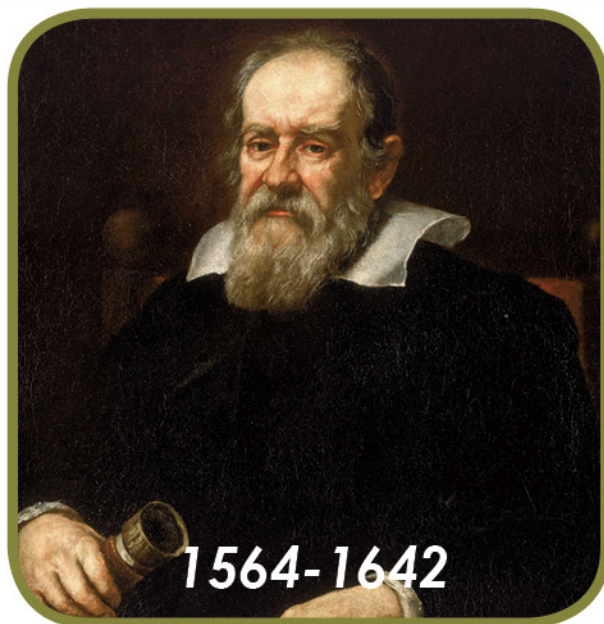

To be continued... >>

**Reading****3** min

Read with the teacher and then answer the question below.

Galileo Galilei was another great scientist who **revealed** scientific evidence to support the idea that the Earth moves. When people criticized him, he told them that no matter what they said or did to him, they couldn't change the fact that the Earth moves.

What do you think of Galilei's answer?

To be continued... >>

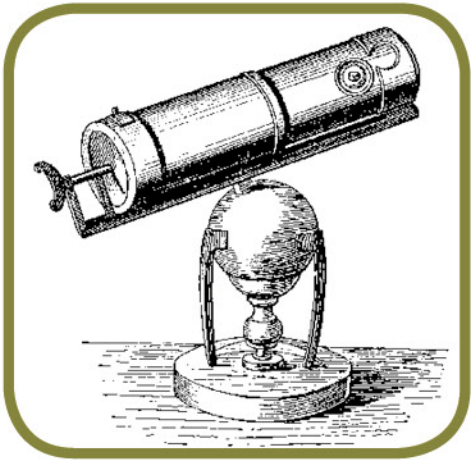

Reading

4 min

Read with the teacher and then move to the Word Focus.

Even though both Copernicus and Galilei were laughed at, their research and discoveries marked the beginning of the **scientific revolution**. Eventually, their discoveries **irreversibly** changed people's views on science.

Word Focus

- If people keep hunting elephants, these majestic creatures will **irreversibly** disappear.
- Has anything happened to you that **irreversibly** changed your life?

**Task****4**

min

Use the words in the boxes below to create correct sentences.

in one place, strongly believed
that, stays, the Earth, for
thousands of years, people

For thousands of years, people strongly
believed that the Earth stays in one place.

it took a great effort, this belief,
in people's minds, and, to be
shifted, was deeply rooted

formulated, was the first one,
Nicolaus Copernicus, who, of
the Universe, a model

scientific evidence, was, who,
Galileo Galilei, revealed, a great
scientist, the Earth moves, that

More challenges! >>

Leadership

4 min

Discuss with the teacher.

Imagine that you could travel back in time to defend Copernicus and Galilei from the people mocking their discoveries.

What would you say to those people to convince them that Copernicus and Galilei were right?

In this lesson, we...

learned about the beginning of the scientific revolution.

learned new words/phrases.
